AI Executive Summary

Rahul Sawant is a Senior Full Stack / Laravel Engineer with 9+ years of experience in designing, developing, and scaling enterprise-grade web applications and RESTful APIs. He specializes in Laravel-based backend architecture, Vue.js-driven frontends, and high-performance MySQL databases. His proven track record includes delivering ERP systems, SaaS platforms, and e-commerce solutions with a focus on clean architecture and performance optimization. He demonstrates proficiency across a wide array of technologies including PHP, Python, Golang, Vue.js, Angular, AWS, and Docker, with a recent interest in AI agents.

ATS Score

82%

Good Match

Skills Found

- PHP
- Laravel
- Symfony
- CodeIgniter
- Python
- Django
- Golang
- RESTful APIs
- MVC Architecture
- Vue.js
- Angular
- JavaScript
- jQuery
- Bootstrap
- HTML5
- AJAX
- MySQL
- MariaDB
- MongoDB
- Schema Design
- Indexing
- Query Optimization
- AWS
- Docker
- Nginx
- Apache
- Git
- Bitbucket
- Jira
- VS Code

Missing Skills

- CI/CD Tools (e.g., GitHub Actions, GitLab CI/CD, Jenkins beyond generic mentions)
- Container Orchestration (Kubernetes)
- Testing Frameworks (e.g., PHPUnit, Jest/Vitest, Cypress)
- Message Queues (e.g., RabbitMQ, Kafka) for enterprise scaling
- Caching Mechanisms (e.g., Redis, Memcached) explicitly mentioned with implementation details
- Observability Tools (e.g., Prometheus, Grafana, ELK Stack)

Strengths

- Extensive experience (9+ years) as a Software Engineer/Full Stack Developer.
- Strong expertise in Laravel and Vue.js, highly sought-after technologies.
- Diverse project portfolio including ERP, SaaS, E-commerce, and government projects.
- Proficiency across a broad technology stack for both backend and frontend development.
- Demonstrated database optimization skills (Schema Design, Indexing, Query Optimization).
- Clear and professional resume formatting, easily parsable by ATS.
- Commitment to continuous learning, as evidenced by the AI Agents course.

Weaknesses

- Lack of quantifiable achievements or metrics (e.g., 'improved performance by X%', 'reduced errors by Y%') in work experience bullet points.
- Cloud and DevOps experience (AWS, Docker) is listed but not deeply elaborated with specific project impact or responsibilities for a senior role.
- The 'MBA (2025)' entry in education lacks clarity; it should state 'Expected 2025' if in progress, or be removed if it's a future plan.
- Some early work experience descriptions are generic and could benefit from more technical detail or specific project outcomes.

Recommendations

- Integrate measurable achievements into bullet points for each role to demonstrate impact (e.g., 'Optimized MySQL queries, reducing report generation time by 30%').
- Elaborate on specific contributions to Cloud/DevOps initiatives, detailing how AWS or Docker were utilized in deployment, scaling, or CI/CD pipelines.
- Clarify the MBA entry: if in progress, use 'Expected 2025' or 'In Progress'. If it's a future plan, consider removing it for now.
- For older experiences, try to add more specific technical details or the unique challenges overcome.
- Consider creating a 'Projects' section for any personal projects or open-source contributions to showcase skills not fully covered in professional experience.
- Add a link to a professional profile (e.g., LinkedIn, GitHub) for recruiters to explore further.
